PROFESSIONAL SUMMARY

Developer Relations engineer and Solidity builder with 4+ years designing EVM smart contracts, developer tooling, and educational content for Web3 ecosystems. Built the **React Native boilerplate** adopted as the standard starting point for Celo hackathon teams — the full DevRel loop: write the starter kit, teach the pattern, watch developers ship. Won **\$20,000 at Gitcoin** (React Native wallet UI), **\$2,000 at the Balancer V3 Hookathon** (volatility-based dynamic fee hook with documentation), and **\$2,500 at Build With Celo** — all shipped as working demos, not prototypes. Comfortable going from **Solidity contract to polished frontend demo within days**. Deployed contracts now powering \$1.5B+ in on-chain private credit at Pact Labs. Portfolio: abhinil.in · GitHub: github.com/t-phoenix

CORE COMPETENCIES

Solidity & EVM Smart Contracts	Developer Relations & Education	Starter Kits & Reference Projects
Rapid Prototyping & Demo Design	React / React Native dApp UIs	DeFi Protocol Integration
WalletConnect & Web3 UX	Hackathon Mentoring & Workshops	

WORK EXPERIENCE

Pact Labs / Cosx.ai 03/2025 – Present

Senior Web3 & Full-Stack Engineer · Remote

- **Deployed EVM and Aptos smart contracts** powering \$1.5B+ in on-chain lending and private credit products, supporting institutional-grade loan lifecycles on-chain.
- Architected on-chain credit structures with the CTO and PMs, translating complex off-chain financial logic into gas-efficient, auditable Solidity contracts — including prototype demos for institutional client onboarding.
- Built and maintained React Native mobile dApps for real-time blockchain interactions: wallet connection flows, credit product UX, and live transaction status.
- Authored internal onboarding documentation and contract architecture guides, reducing new engineer ramp-up time.

Equistart Labs 06/2022 – 03/2025

Web3 Full-Stack Engineer · Remote

- Built a **real-time trading interface** for a Balancer V4 / Uniswap V3-based DEX with live price feeds, dynamic fee mechanics, and WalletConnect integration — from smart contract to production UI.
- Developed DAO governance tooling and a decentralised crypto index product; implemented pool logic, automated rebalancing in Solidity and Foundry, and subgraph-style data pipelines for analytics dashboards.
- Shipped production React and React Native dApps for DeFi and DAO users across iOS and Android, integrating WalletConnect and mobile-first Web3 flows.
- **Won \$2,000 at the DoraHacks Balancer Hookathon** (09–10/2024) for a volatility-based dynamic fee hook for Balancer V3 — shipped with full documentation as a reference implementation.
- Won \$2,500 at the Build With Celo Hackathon (09–11/2022) for Equistart, a full-stack mobile DAO suite dApp on Celo.

Celo Foundation 03/2022 – 05/2022

Developer Relations Engineer · Remote

- Built a **React Native Web3 boilerplate** — WalletConnect, Valora wallet, and working transaction flows — adopted by 20+ hackathon teams as the standard starting point for Celo mobile dApp development.
- Created tutorials and technical blog posts (Medium, HackerNoon) enabling developers to build mobile-first Celo dApps; produced reference implementations and starter templates for the ecosystem.
- Mentored hackathon teams with smart contract architecture guidance and live debugging support, contributing to multiple prize-winning submissions on the Celo network.

ETG India 01/2021 – 06/2021

Full-Stack & Mobile Engineer

- Built an insurtech mobile application integrating GCP AutoML image recognition and Dialogflow; managed Firebase/Firestore backend and deployed to Google Play Store.

DEMO PROJECTS & OPEN SOURCE

Balancer V3 Volatility Fee Hook DoraHacks Hookathon Winner · \$2,000

Custom Balancer V3 hook implementing real-time volatility-based dynamic fee adjustment. Built and documented end-to-end under hackathon conditions — Solidity contract, test suite, and written guide shipped together as a reference implementation for the ecosystem.

Solidity · Foundry · Balancer V3 · EVM · github.com/t-phoenix

Celo React Native Web3 Boilerplate DevRel · Celo Foundation

Reference starter kit for mobile-first Celo dApps: WalletConnect integration, Valora wallet support, working on-chain transaction flow. Adopted as the standard base for Celo hackathon teams. Accompanied by ecosystem tutorials published on Medium and HackerNoon.

React Native · Web3.js · WalletConnect · Celo · github.com/t-phoenix

Equistart DEX — AMM & Real-Time Trading Interface Production · DeFi

Full-stack DEX with Uniswap V3-style pool mechanics, volatility-aware dynamic fees, real-time trading UI with live price feeds, and subgraph-powered analytics dashboard. Shipped to production users.

Solidity · Foundry · React · WalletConnect · The Graph · EVM

AWARDS & COMPETITIONS

1st Place — Harmony Hackathon on Gitcoin \$20,000

React Native mobile wallet UI/UX for on-chain interactions (08–09/2021)

Winner — Balancer Hookathon on DoraHacks \$2,000

Volatility-based dynamic fee hook for Balancer V3 EVM smart contracts (09–10/2024)

Winner — Build With Celo Hackathon on HackerEarth \$2,500

Equistart — full-stack mobile DAO suite dApp on Celo (09–11/2022)

Winner — Green NFT Hackathon on Gitcoin \$1,700

Research evaluating NFT platform and blockchain environmental impact (03–05/2021)

EDUCATION

Integrated M.Tech — Computer Science & Engineering · IIIT Bangalore

2016 – 2021

SKILLS

Smart Contracts & Protocols: Solidity, EVM, Foundry, Hardhat, OpenZeppelin, Ethers.js, Web3.js, ERC-20/721/1155, DEX/AMM design, DAO governance, on-chain credit, Aptos Move

Developer Education: Technical writing (Medium, HackerNoon), tutorials, starter templates & boilerplates, hackathon mentoring, live workshops, ecosystem documentation

Frontend & Mobile: React, Next.js, React Native (JS), Flutter (Dart), WalletConnect, Valora, Firebase, Google Play deployment, DeFi/DAO/wallet UX

Security & Architecture: Smart contract architecture & code review, invariant testing, gas optimisation, upgradeable contract patterns, multisig management, CI/CD for contracts

Indexing & Analytics: Event indexing, subgraph-style data pipelines, on-chain analytics dashboards, The Graph
